

>>> Service Contracts

TetraSoft now offers service & maintenance contracts for our small, medium, or large business customers. These plans can be custom designed around your business' needs whether you have two PCs or two hundred. Service options range from next business day service, same day 8 hour service, 4 hour service, or same day emergency service.

Many problems businesses experience with their computer systems can be avoided by taking the proper steps to ensure that general maintenance procedures are conducted on a regular basis. For those problems that cannot be avoided, making sure that backup systems are in place and functioning properly, before they are needed in an emergency situation, is critical. TetraSoft offers in-depth, low cost maintenance plans designed to protect your equipment investment and keep your entire networking running smoothly.

Retaining a qualified computer professional on a full-time basis can be very costly. Experience shows that IT professionals are needed, but not necessarily on a full-time basis. We also understand that many companies will only require computer services a few hours per month. That's why our maintenance plans are designed around your business. Why pay a full time IT team to resolve your company's computer needs when we can bring an entire team of professionals to your aid to resolve a much broader range of problems?

Price:	\$35.00 per PC per month
